

LSDF Small Primary Armory

The LSDF designed small primary armory compartment is intended to serve as the primary small arms and lesser heavy munition supply pool for small starships, outposts, and other structures. These armories are intended to be utilized by the LSDF and affiliates.

Information

The small primary armory has been designed to serve as a crew-friendly source of equipment and supplies in the event of a combat operation. Weapons are stored neatly within lockers which require a biometric and password confirmation for access. Stored weapons are kept beneath the deck-plates of the armory to provide optimal space conservation. The small primary armory is a two-floor fifteen meter wide, fifteen meter long, and ten meter tall compartment. An attached enclosure also houses a small work area for armorers to repair or modify weapons stored within the armory.

The structure of the small primary armory consists of a [Nerimium](#) external layer, boron carbide middle layer, [Duremium Alloy](#) interior layer, with a middle interior portion influenced by gravitational and precision electromagnetic fields which effectively make the armory into a well shielded bottle which would be able to endure a sizable portion of weapons fire or scalar emissions. The hatch for the small primary armory is composed of the same layering as the bulkhead structures, yet also includes an external forcefield projector. Access to the armory is controlled by biometric confirmation, pass-code confirmation, and [Pico-Jelly](#) key.
