

LSDF Vehicle Storage Bay

Designed for the storage of vehicles aboard Lorath Self Defense Force ships and in installations, the vehicle storage bay is intended for the storage of fighter craft, power armor, large armor units, and similar vehicles including shuttles and some ground vehicles. Vehicle storage bay dimensions vary based upon the platform in which the storage bay is installed. Standard features of all vehicle storage bays include an automated rack system which effectively allows for vehicles to be stored upon massive shelves and suspended racks which can then be moved to a vehicle lift system when the vehicle is needed for deployment. Vehicle storage racks can be manually operated by the use of guide chains in the event of catastrophic power failure.
