

NMX Weapons

Until there's individual pages for the weapons of the NMX here's the quick and dirty descriptions of NMX weapons used in the [Third Mishhuvurthyar War](#).

Image	Weapon Name	Description
	M1 Type 45 Service Pistol	Basically a clone of the Nekovalkyrja Service Pistol, Type 33 , it has a normal setting, a heavy setting, and a stun setting. Kind of expensive and used mainly by NMX Navy Nekovalkyrja. 50 shot capacity. Kind of complicated and sensitive design. The NMX Army prefers the more rugged M3.
	M2 Radiant Pistol	Fires microwave heat-rays <i>and</i> incredibly hot orange plasma, has a wide-beam setting turning it into a sort-of flamethrower; weapons tech stolen from a hostile machine faction. Capacity listed as a percentage.
	M3 Type 45 Pistol	The most common NMX Army weapon, this is kind of a magnum NSP that, instead of having a heavy mode, just fires heavier shots about twice the power of the Nekovalkyrja Service Pistol, Type 33 . Can cause flesh to explode. It makes this heavy ka-chunk sound when it fires, which is a bunch of capacitors moving in the forward section. 20 shot capacity. Solid construction can take a lot of punishment and abuse. Preferred by NMX ground forces.
	NMX "Impaler" Particle Beam Rifle	Powerful particle rifle. See page.
	M5 Sniper Rifle	Fires large-caliber conventional rounds. Highly accurate at long range.
