

Extended ARROW Rack 2B

Originally produced by [NAM](#) for the [Aggressor Heavy Assault Armor](#), its large payload of mini-missiles bridges the gap between the borderline overkill BOLT and next to harmless DART.

It was modernized as the 2B in early [YE 37](#).

OOC Notes

- The article appears to have been the only missile rack for the [Aggressor Heavy Assault Armor](#) that was made into an article, and by the looks of it, to fit onto a pair of helicopters/gunships which are obsolete - CadetNewb
