

Her'ki

Developed for recreational use by [Vi'cana Pharmaceuticals](#), Her'ki was introduced in ER490 by then-CEO Re'bahn Vas'cul'meni. The drug was intended to promote production of brain chemicals such as endorphins, dopamine, serotonin and oxytocin that are released inside of the brain when one feels happiness, and increase the effect of said chemicals to cause an extremely euphoric feeling. This can be taken in three separate ways, for different degrees of effectiveness: Liquid Injection, Inhalation through Smoking, or Pill Form. The most effective way would be the injection, while the second would be smoking it, and finally the least effective is pill form.

The Pill Form is the only legal means of this drug, injection and smoking are considered illegal and carry many side effects and health risks that could lead to particularly fatal outcomes, for the user or those around them. So it is strongly recommended that one does not inject or smoke this drug. It should also be noted that the drug should be moderated in its intake, as it can cause the host to become addicted to it.

It should be noted that when the drug is introduced to the body via Injection, or Smoking, it becomes highly addictive due to how quickly it hits the bloodstream, and effects the host. With that quickness, also comes an quick disbursement causing people to require more, and more of it when injected or smoked to allow it to be effective, which could lead to several issues, and withdrawal symptoms if they decide to use so much, and then suddenly stop.

Price: 100 Rn/bag
