# Small Gravitational Maneuvering Thrusters

Currently designed for [Neshaten](#) craft, and used on all ships including fighters, shuttles, and larger starships. The GMT is the Neshaten's way of maneuvering their ships, originally this was done in the form of chemical thrusters but in the year of EE 001-v that changed with the invention of the GMT's, the GMT's use gravity instead of chemical thrust to move a ship up, down, left, or right.

The thrusters are quick delicate, and if maintained properly, are also very sensitive and can often times cause a craft to be jettisoned onto a new course after just one hit. The thruster's sensitivity 'has' to be calibrated per fighter, per shuttles, per aviator.

Ideally the GMT is designed to perform low speed tight maneuvers, but can also be used to move a ship around areas as well.
