

Neshaten Power, FTL, STL Technology

This article lists the various types of technology used by the [Kingdom of Neshaten](#) that is used to power their society, propel their ships, and get their ships from one point to another.

Technology	Specifics	Notes ¹⁾
Power		
Lunebaren Crystals	Power Crystals, used to power their reactors	
Intrasystem Devices		
Kthon'ya Intra-System Acceleration Gates	Used mostly within anti-ftl enviroments	
STL		
Crena Energy Engine	Obsolete Engine Technology, found only in old starships and vehicles	
Luxiton Gravitic Engine	Currently used engine technology, entered service in EE 001-v	
Suyrene Stealth Drive Mk 1	Low-speed engine for Stealth operations	
Fi'nein Pulse Engine	Primary engine for starfighters and other small vehicles	Can't be used to provide propulsion for starships, on starships, serves only as a menovuring system.
STL Boosters		
Kur'ken Booster Craft	Used mainly within an anti-FTL environment to quickly move from point A to point B	
Faster than Light Drives		
Kres'tronova Fold Drive	Primary form of FTL	
Reactors		
Lunabaren High-Energy Reactor	Advanced power reactor	
Lunebaren Reactors	Standard reactor	
Generators		
Luna Power Generator	Power Generators	
Manoeuvring		
Graviton Manoeuvring System	Ship Manoeuvring System	Replaces traditional chemical based systems
Fi'nein Pulse Engine	Alternative to the GMS for manoeuvring on starships, or as a suppliment.	As a Manoeuvring system, found only on starships and starfighters
Batteries/Cells		
NG-1 Power Cells	Power Cells	Provides a temporary source of power, when a reactor or generator isn't feasible
