

Traffic Control Department

Part of the [Neshaten Division of Transportation](#), the TCD is responsible for monitoring all traffic on the roads and for ensuring that drivers can find alternative paths from constructions and emergencies. They also monitor the roads for anything that could present an obstruction such as broken water mains, downed power lines, or even Spiked Rain. They are also responsible for air/space traffic control.

The department is split into three centers, each one tasked with handling one small area of the department.

Highway Traffic Control

The HTC is responsible for monitoring all highway traffic, ensuring that people obey the laws as much as possible while also looking for possible criminal activity. They also operate the many holographic road signs which can either display advertisements or cautionary warnings for drivers.

Monitoring the highway roadways is done via closed circuit camera's and sensors embedded in the roadways.

Starship Traffic Control

Responsible for operating all air and space traffic, the STC carries a greater deal of risk than the other two centers, due in large part of the large amount of air and space traffic that occurs over large cities such as the Neshaten capital of [Netoshen](#).

They must ensure that all air and space traffic only passes into acceptable flight zones and doesn't cross into military zones.

On the flipside, they also help guide military based traffic such as shuttles and transports and work closely with military traffic controllers.

Street Traffic Control

This particular center monitors all street based traffic, looking for signs of criminal activity or people possibly breaking the law and also crashes that might or have occurred and then sending notes to the emergency response center.

Monitoring the roadways is done via closed circuit camera's and sensors embedded in the roadways.
