

Continuum Distortion Drive

Continuum Distortion Drive is a method for faster-than-light (FTL) travel in the [SARPiverse](#).

History

Continuum Distortion Drive has been in use since [YE 22](#) when it was acquired by the [Star Army of Yamatai](#) on expedition to another universe. Prior to this, [Hyperspace Travel](#) was the only form of FTL transportation.

Description

Continuum distortion drive (CDD) propels a ship at speeds many times the speed of light by generating continuum distortions and nesting them to create asymmetric peristaltic fields, using a set of distortion coils. This allows the ship to travel thousands of times the speed of light. CDD can also be used to propel a ship at sublight speeds.

Usage

Continuum Distortion Drive is used on most [Star Army of Yamatai](#) ships and ships made by [Ketsurui Fleet Yards](#).

Examples of Drives

Below is a non-all-inclusive list of some CDD drives.

- [NovaCorp Continuum Distortion Drive](#)
- [Geshrinari Continuum Distortion Drive](#)
- [Mizu Series Continuum Distortion Drives](#)
