

300mm Mass Launcher Round

Developed in [YE 39](#) for the [Star Army of Yamatai](#) by [Kage Yaichiro](#), the 300mm Mass Launcher Round was made explicitly for the [Ke-D7-W3900 Mass Launcher](#). It can also be used in the [Ke-D7-W3200 Mass Driver Gun](#) as a direct replacement for its armor penetrating round. The round is made of [Durandium Alloy](#) with a sharpened tip.

A key difference between this round and its older counterpart is that the 300mm Mass Launcher Round is designed to be easily and quickly made in a [Ke-D7-M3900 Chiaki Pylon Module](#)'s Fabrication Chamber or a larger ship's dedicated Fabrication Area for replenishment between battles. The round lacks its predecessor's monomolecular [Zesuaium](#) tip after feedback indicated that the Zesuaium's impact on the earlier round's penetrative nature was negligible, especially due to the increased speed of the new round.

Stats

- Damage Rating: [Tier 10](#), Light Anti-Starship
- Size: 1500mm x 300mm x 300mm
- Caliber: 300mm
- Mass: 200kg
- Damage Description: Armor-piercing kinetic damage
- Effective Range variable up to 2.25 light seconds (0.0045 AU / 674532 km / 419135 miles)
- Muzzle Velocity: variable up to 0.75c
- Muzzle Blast: Either non-existent or blue-white flash depending on velocity
- Recoil: N/A
- Energy Source: N/A
