Constant stream for about seven seconds, then recharge of about the same.** Effective DR: 4 (on regular mode) on [personnel scale](#), 1 (on cutting mode) on [armor scale](#)

## History and Description

The T-F1 was Developed by Galar Vanatosk during his college days as an engineer. He only recently has had time to submit it, since he was away on the [YSS Goban](#).

The "Dragonsbreath" looks somewhat like a boxy SMG with a large vent near the butt and a nozzle in place of a muzzle. The tool is a perfect compliment to a Technician or repairman's arsenal, because it functions both as a tool and a personal defense weapon.
