

# Leviathan Husk

Leviathan Husk is a [material](#) produced by [Corporations](#) in [Tsenlan](#).

## History and Background Information

The production of Leviathan Husk began in [YE 26](#), and is a result of continued research into [Leviathan Technology](#). Through the [Mapping of Umarian Leviathan Genomes](#) came the ability to manufacture Leviathan husk, also known as Leviathan flesh; this husk material is used as the shell for starships, vehicles, and the flesh, in general, can be utilized to create living structures utilized by the [Tsenlanese](#) for housing and infrastructure.

As of [YE 44](#), and the arrival of [norians](#) in the [Kagami Galaxy](#), Leviathan husk will be created by [Tsenlan](#)-based [Corporations](#) once they are established. In the meantime the material is produced on the surviving Ark vessels which carried the [norian](#) people to safety.

Year of Creation	<a href="#">YE 26</a>
Designer	<a href="#">Tsenlan</a>
Manufacturer	<a href="#">Tsenlan State Quorum</a> , other <a href="#">Tsenlan</a> organizations
Fielded by	<a href="#">Tsenlan</a> and the <a href="#">Yamatai Star Empire</a>
Availability	Mass Production
Damage Rating	Dependant on Scale of Product <sup>1)</sup>
Cost	Moderate to Very Expensive depending on structure <sup>2)</sup>

## Manufacturing

Leviathan husk is manufactured through  [biological engineering](#), the process demands the activation of Leviathan stem cells which are grown in specialized vats containing a nutrient-rich solution containing a wide variety of metal alloys and organic material. The genome of the cells can be manipulated to various patterns of  [cellular differentiation](#) which creates layers of scaled flesh. Depending on the application the thickness of this flesh can vary from a few millimeters to several meters thick.

As that Leviathan husk is  [organic matter](#) which is infused with several  [metal alloys](#) it requires the circulation of nutrient-rich biosynthetic slurry to remain alive. It provides protection relatively similar to [Yamataium](#) in that it has self-healing properties and is highly resistant to damage, especially when arranged in scale or multi-layered formations designed to undergo  [Ablation](#).

## Weaknesses

Like any  [matter](#)-based armor or protection it is more susceptible to damage by [antimatter](#) and high

energy plasmas such as [Aether](#).

## OOC Notes

[Andrew](#) created this article on 2022/10/15 10:17.

This article was approved by [Wes](#) in this [thread](#)

1)

in [Damage Rating \(Version 3\)](#), Can be considered Heavy Armor when applied to [Star Army of Yamatai Starship Speeds](#)

2)

Always considered Very Expensive for Armor Applications
