

Saiki Cluster

Saiki Cluster: (-900,-103) from Kiyko Sector

The Saiki Cluster is located about 900 light-years west of [Yamatai Star System](#), and 1,000 light-years north of the [Ketsurui Military Sector](#). The cluster was originally explored by the [Scientific Studies Service \(SSS\)](#) as part of [Project Kyasshu](#). Shortly after they established a colony at [Daichi System](#), the [Second Expeditionary Fleet](#) was reformed and sent to protect this Cluster.

History

The [Yamatai Star Empire](#) first explored the Saiki Cluster in [YE 31](#).

YE 31

Exploration of the Saiki Cluster began as part of the [Scientific Studies Service \(SSS\) Project Kyasshu](#) and began towards the end of [YE 31](#), with [SX-03](#) and [Daichi System](#) being explored first. The [SSS](#) established

a colony [Ryou](#) on planet [Daichi](#), and deployed the [Project Kyasshu - Kanmon](#) on only planet in the [SX-03](#) system.

Shortly after the colony was established the [Second Expeditionary Fleet](#) was re-established and deployed to protect the colony and create a new base of operation from which to strike at the [NMX](#).

The Saiki Cluster is named after the founder of the [SSS Saiki Kouan](#) who made the decision to deploy the majority of the organizations resources out there to protect them from the NMX and to support the Empire by experimenting and developing new technologies.

YE 32

Exploration continued with [SX-05](#) being surveyed, and three other systems identified and scheduled for exploration.

[Saiki Nebula](#) initially explored, by the [YSS Gosei](#), which was damaged during the exploration.

YE 33

Two new settlements are added to Daichi at the start of the year, [Joukai](#) in the mountains, and [Bakufu](#) along the coast.
