

Ke-M2-E3000 Leader Support Pack

Realizing the need for some Mindy to be dedicated team-leader models on the fly, the Leader Support Pack (LSP) is a valuable piece of equipment for squad commanders and other support personnel. Housing a miniaturized [CIES](#) computer and boasting a more comprehensive sensor and communication suite, the LSP can turn a Mindy into a center for coordinated operations

Contains

- [Compact Integrated Electronics System \(CIES\)](#)
- Hyperspace Communication Unit

The LSP contains a Hyperspace Communication Unit to compliment the Mindy's onboard Subspace transmission system. This allows faster than light communications over a great distance and is perfect for allowing a Mindy squadron to remain active and operational far from Star Army territory.

- Quintessent Wave Differentialometer:

This device, created with both back-engineered enemy technology from the debris 2nd Battle of Ralfaris and the already advanced understanding of aetheric energy, gives the Mindy an extra edge by calculating the shape, mass and velocity of objects by looking at the ripples the objects make in the seas of energy. The QWD has a range of 400 miles (643.738 km), and is an additional sensor system that is invaluable for detecting stealthed or phased units – in addition to providing additional target information.
