

# Ke-T4-2A "Vixen" Command Aeroshuttle

A variant of the [Ke-T4 "Fox" Combat Aeroshuttle](#), this shuttle's rear section contains expanding side walls that roughly double to normal size of the shuttle's living space in the rear compartment, creating a room.

Intended for use as a Tactical Operations Center for platoons of [Star Army of Yamatai](#) infantry, the room contains a central planning table with holographic capabilities and six consoles with wall displays along the two sides. The Vixen also contains high-end communications equipment. Folding chairs for eight people are attached to the ceiling when the room is not in use.

The shuttle also carries a cargo pod on the underside for camouflage netting (containing [Xiulurium](#) stealth materials), poles, and digging tools to entrench the shuttle.
