

Ke-V9-P3300 Turbo Aether Plasma Drive

The Ke-V9-P3300 Turbo Aether Plasma Drive was developed for use on the [Ke-V9 "Nodachi" Assault Fighter](#) and became available in [YE 33](#).

About

The Ke-V9-P3300 system utilizes raw [Aether](#) from an adjacent power plant, which is supercharged and accelerated in a subspace acceleration tunnel array until it reaches a plasma state. The [Turbo Aether Plasma Drive](#) is field-jacketed, directed and expelled to the ships stern at a high-percentage of the speed of light in order to provide thrust. Engine backwash can prove hazardous to nearby ships - causing equivalent damage to a charged particle cannon (Approximately Tier 9, Heavy Anti-Mecha - Tier 11, Medium Anti-Starship), though only at close distances.

Specifications

General Information

Class: Ke-V9-P3300 Type: Sub-light Drive Designers: [Ketsurui Fleet Yards](#). [Murasaki Emiko](#) Manufacturer: [Ketsurui Fleet Yards](#) Production: Mass Production

Dimensions

Length: 2.90 meters Width: 1.21 meters Height: 76 centimeters
