

U'ia

U'ia is a star system discovered by a [Neshaten](#) probe, it resides on the farthest eastern border of Neshaten territory. It was discovered in [ER 002](#), but due to the limitation of the science probe, it was not till [ER 125](#) that the system was fully scanned. There is an industrial planet that provides the [Kingdom of Neshaten](#) with minerals, metals, and responsible together with [No'menshan](#) for the larger productions.

The Flag

The Flag of the U'ia is below.

Industry

The U'ia system is the secondary source of industry for the Kingdom. Where [No'menshan](#) is more leaning on mining operations throughout their system and the process of the refinery. The U'ia system focuses on the production of most products that are requested by the Kingdom. The [Shukara Volunteer Navy](#) has most of their shipyards located here and the due to its importance also receives a military fleet that patrols the area.

History

More facts about the U'ia System are listed below.

- The system was first discovered by the [Kingdom of Neshaten](#) in [ER 002](#).
- Yet it was not until [ER 125](#) that the [Kingdom of Neshaten](#) could further explore the star system to be mapped and later that same year be colonized.
- The [Kingdom of Neshaten](#) focused on having this system along with [No'menshan](#) to become one of their bigger industry to fight the ecological problems at their main star systems.

The Heart of a U'ia

About the U'ia System Star, Planets, and other features.

The U'ia Star

The heart of the U'ia System:

The U'ia Star	
System Registry	U'ia-M-2
Star Names	U'ia
Type	M2 V Red Dwarf
Distance	Central Star
Radius	2.80 x 10 ⁵ km
Surface Temperature	3100 K
Average Mass	6.09 x 10 ²⁹ kg
Luminosity	1.68 x 10 ²⁵ W
Number of Planets	7

This is the main sequence star for the U'ia system. The star is emitting solar flares at a rate of twenty every few days.

U'ia 1

U'ia I is the first planet in the system, its also the most unfortunate as well, as the planet is covered in thick fields of lava as a result of its parent star constant solar flare activity.

U'ia 2

U'ia II, the second planet in the system, is a rocky planet with several underground caverns. The planet's surface is covered in toxic and acidic clouds.

U'ia 3

U'ia III is another rocket planet in the system, unlike U'ia II, however; its surfaces are much more forgiving.

U'ia 4

U'ia IV is a very cold planet, thanks in large part to the asteroid field that blocks out the majority of the sun. Its surface is covered in ice, and its temperatures routinely drop down to negative four hundred degrees during the day. This made the planet ideal for industrial operations, the balance between the extreme cold and the operational heat of the industry would create a balance. The colony became also the location where a lot of fur white [Shukaren \(Species\)](#) started to come from due to their endless work in the freezing and snowy weather.

The planet also knowns to have a certain amount of refined water production that is popular in the [Neshaten](#).

U'ia 5

U'ia V is another ice planet, but one that is much colder, with temperatures going down to almost negative one thousand degrees, making its surface hazardous even for machinery. There are steam vents on the surface that eject large chunks of ice, although presently it is unknown what generates the steam.

The [Neshaten](#) has small operational outposts at these steam vents to harbor the inner planetary volcanic warmth to keep the location operational. There are three large [Shukara Volunteer Navy](#) shipyards operational in orbit of U'ia V that are responsible for the production of the military fleet.

U'ia 6

U'ia VI is a gas planet that contains  [hydrogen](#) and  [helium](#) that is being mined by specialized mining corporations and processed in orbit by a mobile gas refinery.

U'ia 7

The third ice planet of the system, and one that actually has a semi-livable atmosphere, with an active electrical storm that ravages the surface. Due the growth of the industry, the [Neshaten](#) has plans to colonize this planet in the nearby future.

Export and Trades

The U'varun System exports and trades the following goods.

Primary Industry
 mining ,  refinery ,  industry and  trade

People

The population of the U'varun System is consistent of [Shukaren Daur \(Sub-Species\)](#) and [My'leke \(Species\)](#). Other species of other factions are not allowed to settle down on the colony. The [Shukara Volunteer Navy 2nd Fleet](#) is responsible for protection of this system.

Characters

The [Characters](#) that are located here:¹⁾

Nothing found

RP Opportunities

Great roleplay opportunities.

- Survival training on U'ia IV.
- Visit the large industrial areas of U'ia IV and U'ia V.
- Launch from the shipyards of the [Shukara Volunteer Navy](#).

Local Rumors

Maybe True, Maybe not.

- The 2nd fleet had an alien encounter at the borders of this star system.
- The large circle-shaped gas at U'ia VI was trigger by an accident.

OOC Notes

Kalshion created this article on 2015/06/01 22:05. Updated by [Rawolfe](#).

- Art was created in Artbreeder and the Flag was created by [Rawolfe](#).
- This was approved by [Andrew](#) on 02/25/2021.²⁾
