

NDC Combined Weapons Technology Doctrine

The Combined Weapons Technology Doctrine is an effort to create a standard set of weapons technologies that can be applied at any scale. Supplemental technologies will be developed in parallel to improve weapon operation.

History

In [YE 43](#), researchers at [DOARAD](#) realized that a not insignificant amount of their development time was being spent on ways to apply existing weapons technology at a scale that it wasn't originally designed for.

Rather than create dozens of weapons designed to operate at all possible scales, they instead decided to create a few well-designed, best-practice backed sets of designs that could be applied to everything from a basic handgun to a capital warship's main cannon. Alongside this would be a suite of supplemental technologies that could be applied to any of their weapons for improved effect. While the upfront effort would be somewhat taxing, the long-term benefits of reduced R&D and improved maintenance logistics is expected to pay off.

Examples

These are known examples of this doctrine still in use as of [YE 46](#)

- [Sutafaia Fusion Shell](#) available in most calibers, gauss effect armed thermonuclear shell
- [Storm Rifle II](#) Available in 5X30mm flechette A variant and 12.5X75mm flechette B variant cannon
