

Landing Claw

WIP: This article is a work in progress and is not yet approved for usage in the RP.

The LC is the default type of landing gear found on all [Kingdom of Neshaten](#) vessels, including small to large ships. It allows such ships the ability to land on hard surfaces but also on uneven ground, as the claws are pneumatically controlled to adjust for uneven terrain.

Each Claw is made up of anywhere from three to six different prongs, the number is based entirely on the ship that the LC is affixed; although this isn't entirely the truth, it can also be based on the actual mass factor of the ship itself or what said ship is being used for. Transport ships for example might be smaller but may have a claw that has six prongs on it, while a ship of similar size that isn't designed for transporting might only have a three claw system.

Anti-gravity based 'clamps' are built into the prongs which allows it to attach itself securely to metallic surfaces. The LC is bathed in a [Energized Crynatorium](#) armored coating to protect it from small arms fire.
