

# NH-40 Nekovalkyrja Mishhuvurthyar

Note: Historical. Not for player use.

The NH-40, *Ningyô Heiki Type Forty*, or Type 40, is a hybrid of the [Nekovalkyrja](#) and [Mishhuvurthyar](#) that was created by [Pumpkin](#) and ex-[PNUgen](#) scientists and finalized in [YE 40](#).

## More About the NH-40

A hybridized Nekovalkyrja and Mishhuvurthyar named Pumpkin created this type with help from ex-PNUgen scientists by modifying her own young through a series of successful genetic and skeletal augmentations, resulting in a creation that is able to act on its own or as a unit with others of its kind.

NH-40 can be designed to have a lack of personal freedom as their uninterrupted secondary memory wirelessly transmits itself to Pumpkin at all times. This feature is normal for NH-40, but can be done away with upon creation if specified.

## Characteristics of the NH-40

The characteristics of the NH-40 can be found below.

- Physically attractive female with furless pointed ears, 5'8" - 6'11" in height, athletic physically, four fingers and a thumb, full spectrum of skin, hair, and eye colors
- Spiked and icicle-like red or blue arms, legs, and backs (where [SPINE](#) is typically located, which does not detract from their ability to interface but heightens it)
- Enhanced eyesight which allows the NH-40 to see in infrared vision up to 30 meters (100 feet) based on heat as well as ultra-violet vision, x40 zoom for distance vision, x50 milliscopic vision for detail work
- Inertia control which allows them flight up to 242 kph (150 mph).
- Enhanced hearing is unidirectional
- Reinforced [Metallic Glass](#) skeleton
- Nanomachine derived marrow
- [Hemosynthetic](#) internals (nanomachines coupled with blood cells)
- Solid volumetric projection up to one foot from the body
- Digital mind allows for concrete storage of memories, telepathy, as well as wireless information exchange, which can all be encrypted. Primary memory is of a more personal nature and secondary memory records objectively, at all times.
- Control over electrostatic and magnetic forces up to 1 meter (3 feet) around the NH-40's body that can act as shielding.
- Sub-dermal plating of glassy metal
- Able to speak all known languages of the Kikyō Sector, but predominantly use [Yamataigo](#) and [Trade](#)
- Life span estimated to be around 250 YE

## Replication

Pumpkin's NH-25 body self-clones youngling through birth. Her youngling, after one month, are fully grown and able to self-replicate, as well. They do not lay eggs nor have the ability to do so. Their wombs are created with fail-safes, which release toxins in the eventuality that a foreign object or entity enters. They are not created for procreation in the typical humanoid or Mishhuvurthyar senses of the word.

## History

The history of the NH-40 begins with the NH-25 and follows the history of one of these types of Nekovalkyrja while she works on the expansion of the NH-40 Nekovalkyrja type.

## NH-25

The NH-25's past stems from when specific NH-19 Experimental Nekoalkyrja (Mishhuvurthyar) opted to enter a body transfer so that they could copy their mind into a form that could better be able to interact with Yamataian species through facial expressions, gestures, and speech.

The NH-25 is an advanced version of the NH-17 Nekoalkyrja, but with additional ability to change their legs into extraordinary NH-19 appendages.

The NH-25 are considered the Pumpkin-type and are ones that have pinkish skin and green eyes with a Nekoalkyrja upper half. They have a lower half that can shift between having legs and having many tentacles that can become like those seen on Mishhuvurthyar, with only stinger-like abilities (that have the possibility to be laced with muscle relaxer and a mild sedative) with a look similar to a dress or skirt.

## Pumpkin

Pumpkin is one of those NH-19 that swapped into a NH-25 body and has a long-standing history with the [Star Army of Yamatai](#). She has been interrogated by princesses and given them information as well as taken lives, which makes her a strong frienemy of the Yamatai Star Empire.

She was a part of many organizations, namely the *True Nekoalkyrja Empire*, made up of many creations much like herself that strive for success in their mission, which is the proliferation of the NH-series. The Empire Pumpkin was a part of has very little contact with the [NMX](#), but works with [Black Spiral](#) on an intimate level.

Pumpkin distanced herself from Black Spiral some YE ago after her encounters with the [YSS Sakura](#) and having a hand in the Mishhuvurthyar impregnation of [Ketsurui Hanako](#), who she had captured, interrogated, and watched become impregnated. Despite her personal disavowment of the organization, she is still able to covertly glean information from them. She left without a trace nor word from the True Nekoalkyrja Empire, as well, for the remote North Eastern systems of the [Kikyō Sector](#), where she now resides, forming an army.

## NH-40

Pumpkin began the continuation of herself in a new image through extensive self-cloning and self-procreation of her young while undergoing experimental augmentations. The characteristics of Pumpkin's offspring have changed so much from the typically seen NH-25 that they are now dubbed as being the NH-40, as their form was finalized in early YE 40. Ex-PNUgen scientists worked closely with her, performing harmful and invasive tests on the NH-25 model in order to create something *more* than what the NH-17 and NH-19 ever were when together. They made the NH-40 model.

## OOC Notes

WIP for use as a GM tool.
